This is an ideal introductory textbook for undergraduates studying the applications of mathematics of curves and surfaces especially in the generation of computer graphics and computer aided design Written by established textbook authors the text develops ideas in differential and computational geometry with numerous exercises solutions and worked examples throughout providing students with ample opportunity to test their knowledge Only a basic knowledge of vector the authors give a thorough introduction understandable and readable for mathematicians as well as people in other technical areas The organisation of the chapters in such a way that it can be used as a textbook for university courses a useful handb
