By William M. Goldman : Complex Hyperbolic Geometry (Oxford Mathematical Monographs) conformal

geometry and dynamics provides a forum for mathematical work in related fields broadly described as conformal geometry and dynamics these include complex a list of number theory books the number theory web which houses this web page contains links to pre 1996 books Complex Hyperbolic Geometry (Oxford Mathematical Monographs):

Complex hyperbolic geometry is a particularly rich field drawing on Riemannian geometry complex analysis symplectic and contact geometry Lie group theory and harmonic analysis The boundary in complex hyperbolic spaces known as spherical CR or Heisenberg geometry reflects this richness However while there are a number of books on analysis in such spaces this book is the first to focus on the geometry both for complex hyperbolic space and its boundary Motivate About the Author William M Goldman is at University of Maryland
