By Patrick B. Eberlein : Geometry of Nonpositively Curved Manifolds (Chicago Lectures in Mathematics)
Geometry of Nonpositively Curved Manifolds (Chicago Lectures in Mathematics):

Starting from the foundations the author presents an almost entirelyself contained treatment of differentiable spaces of nonpositivecurvature focusing on the symmetric spaces in which every geodesic liesin a flat Euclidean space of dimension at least two The book builds toa discussion of the Mostow Rigidity Theorem and its generalizations andconcludes by exploring the relationship in nonpositively curved spacesbetween geometric and algebr About the Author Patrick B Eberlein is professor of mathematics at the University of North Carolina at Chapel Hill
