This book surveys the differential geometry of varieties with degenerate Gauss maps using moving frames and exterior differential forms as well as tensor methods The authors illustrate the structure of varieties with degenerate Gauss maps determine the singular points and singular varieties find focal images and construct a classification of the varieties with degenerate Gauss maps From the reviews The study of the Gauss map of algebraic varieties falls into the fields of the so called projective differential geometry hellip the authors show their mastery of the Cartan method stating and proving the most interesting results h
