From Springer : Statistical Thermodynamics and Differential Geometry of Microstructured Materials (The IMA Volumes in Mathematics and its Applications) Statistical Thermodynamics and Differential Geometry of Microstructured Materials (The IMA Volumes in Mathematics and its Applications):

Substances possessing heterogeneous microstructure on the nanometer and micron scales are scientifically fascinating and technologically useful Examples of such substances include liquid crystals microemulsions biological matter polymer mixtures and composites vycor glasses and zeolites In this volume an interdisciplinary group of researchers report their developments in this field Topics include statistical mechanical free energy theories which predict the appe
