By Chuanming Zong : Strange Phenomena in Convex and Discrete Geometry (Universitext) Strange Phenomena

in Convex and Discrete Geometry (Universitext):

Convex and discrete geometry is one of the most intuitive subjects in mathematics One can explain many of its problems even the most difficult such as the sphere packing problem what is the densest possible arrangement of spheres in an n dimensional space and the Borsuk problem is it possible to partition any bounded set in an n dimensional space into n 1 subsets each of which is strictly smaller in extent than the full set in terms that a layman can under From the Back Cover This book presents some of the most famous problems of convex and discrete geometry such as Borsuk s problem is it possible to partition any bounded set in an n dimensional Euclidean space into n 1 subsets each of which is strictly smalle
