in mathematics pdf by marcel berger the magnitude of Differential Geometry: Manifolds, Curves, and Surfaces (Graduate Texts in Mathematics):

This book consists of two parts different in form but similar in spirit The first which comprises chapters 0 through 9 is a revised and somewhat enlarged version of the 1972 book Geometrie Differentielle The second part chapters 10 and 11 is an attempt to remedy the notorious absence in the original book of any treatment of surfaces in three space an omission all the more unforgivable in that surfaces are some of the most common geometrical objects not only in m Language Notes Text English French translation
