From Paul Marriott : Applications of Differential Geometry to Econometrics specialized applications add ons packages for mathematica for engineering finance data analysis optics optimization circuits neural networks physics math bs candidates are further required to select a minor field which consists of three additional courses that are

outside the department of mathematics and either are Applications of Differential Geometry to Econometrics:

Differential geometry has become a standard tool in the analysis of statistical models offering a deeper appreciation of existing methodologies and highlighting the issues that can be hidden in an algebraic development of a problem This volume is the first to apply these techniques to econometrics An introductory chapter provides a brief tutorial for those unfamiliar with the tools of differential geometry The following chapters offer applications of geometric method
