From Cambridge University Press : Geometric and Topological Methods for Quantum Field Theory geometric langlands seminar this is an archive of email messages concerning the geometric langlands seminar for 2012 13 the mathematisches forschungsinstitut oberwolfach mfo oberwolfach research institute for mathematics is an international research centre situated in the german Geometric and Topological Methods for Quantum Field Theory:

Aimed at graduate students in physics and mathematics this book provides an introduction to recent developments in

several active topics at the interface between algebra geometry topology and quantum field theory The first part of the book begins with an account of important results in geometric topology It investigates the differential equation aspects of quantum cohomology before moving on to noncommutative geometry This is followed by a further exploration of q From the Back Cover This volume offers an introduction in the form of four extensive lectures to some recent developments in several active topics at the interface between geometry topology and quantum field theory The first lecture is by Christine Lescop o
