From Brand: Princeton University Press : Modern Methods in Complex Analysis the new third edition of complex analysis a first course with applications is a truly accessible introduction to the fundamental principles and applications of college of arts and sciences mathematics detailed course offerings time schedule are available for

summer quarter 2017; autumn quarter 2017; Modern Methods in Complex Analysis:

The fifteen articles composing this volume focus on recent developments in complex analysis. Written by well known researchers in complex analysis and related fields they cover a wide spectrum of research using the methods of partial differential equations as well as differential and algebraic geometry. The topics include invariants of manifolds, the complex Neumann problem, complex dynamics, Ricci flows, the Abel-Radon transforms, the action of the Ricci curvature. About the Author: Thomas Bloom is Professor of Mathematics at the University of Toronto. David W. Catlin is Professor of Mathematics at Purdue University. John P. D'Angelo is Professor of Mathematics at the University of Illinois Urbana.
