By Jacek Graczyk, Grzegorz Swiatek : The Real Fatou Conjecture the story of mathematics list of important mathematicians 1976 saw a proof of the four colour theorem by kenneth appel and wolfgang haken the first major theorem to be proved using a computer the four colour conjecture was The Real Fatou Conjecture:

In 1920 Pierre Fatou expressed the conjecture that except for special cases all critical points of a rational map of the Riemann sphere tend to periodic orbits under iteration This conjecture remains the main open problem in the dynamics of iterated maps For the logistic family x ax 1 x it can be interpreted to mean that for a dense set of parameters a an attracting periodic orbit exists The same question appears naturally in science where the logistic fa About the Author Jacek Graczyk is Assistant Professor of Mathematics at Michigan State University Grzegorz Swiatek is Associate Professor of Mathematics at Pennsylvania State University
