The main goal of this work is to revisit the proof of the global stability of Minkowski space by D Christodoulou and S Klainerman Ch Kl We provide a new self contained proof of the main part of that result which concerns the full solution of the radiation problem in vacuum for arbitrary asymptotically flat initial data sets This can also be interpreted as a proof of the global stability of the external region of Schwarzschild spacetime The proof which is a sig The book gives a new proof of the central part of the theorem of Christodoulou and S Klainerman The global nonlinear stability of the Minkowski space The authors prove working in terms of double null foliations a nonlinear stability
