By Armand Borel, Lizhen Ji : Compactifications of Symmetric and Locally Symmetric Spaces (Mathematics: Theory & Applications) Compactifications of Symmetric and Locally Symmetric Spaces (Mathematics: Theory & Applications):

Introduces uniform constructions of most of the known compactifications of symmetric and locally symmetric spaces with emphasis on their geometric and topological structures Relatively self contained reference aimed at graduate students and research mathematicians interested in the applications of Lie theory and representation theory to analysis number theory algebraic geometry nbsp and algebraic topology From the reviews In the book under review the authors pursue three chief goals to give a comprehensive overview of existing compactifications hellip to explain the relations among them and to provide a uniform construction hellip The style is user
