By Vladimir Rovenski : Foliations on Riemannian Manifolds and Submanifolds the online version of journal of mathematical analysis and applications at sciencedirect the worlds leading platform for high quality peer reviewed full text in mathematics a 3 manifold is a space that locally looks like euclidean 3 dimensional space a 3 manifold can be thought of as a possible shape of the universe Foliations on Riemannian Manifolds and Submanifolds:

This monograph is based on the author's results on the Riemannian geometry of foliations with nonnegative mixed curvature and on the geometry of submanifolds with generators rulings in a Riemannian space of nonnegative curvature. The main idea is that such foliated submanifolds can be decomposed when the dimension of the leaves generators is large. The methods of investigation are mostly synthetic. The work is divided into two parts consisting of seven. From the Back Cover. The ideas and methods of foliations are very popular in mathematics and its applications. The key problem of this volume is the role of a Riemannian curvature in studies of manifolds and submanifolds with foliations.
