**Applications**) in mathematics a fractal is an abstract object used to describe and simulate naturally occurring objects artificially created fractals commonly exhibit similar chaos theory is a branch of mathematics focused on the behavior of dynamical systems that are highly sensitive to initial conditions chaos is an interdisciplinary Geometry of Harmonic Maps (Progress in Nonlinear Differential Equations and Their Applications):

Harmonic maps are solutions to a natural geometrical variational prob shy lem This notion grew out of essential notions in differential geometry such as geodesics minimal surfaces and harmonic functions Harmonic maps are also closely related to holomorphic maps in several complex variables to the theory of stochastic processes to nonlinear field theory in theoretical physics and to the theory of liquid crystals in materials science During the past thirty years t
