retrouver dans les plus grandes soires en discothque marseille Convexity Properties of Hamiltonian Group Actions (Crm Monograph Series):

This is a monograph on convexity properties of moment mappings in symplectic geometry The fundamental result in this subject is the Kirwan convexity theorem which describes the image of a moment map in terms of linear inequalities This theorem bears a close relationship to perplexing old puzzles from linear algebra such as the Horn problem on sums of Hermitian matrices on which considerable progress has been made in recent years following a breakthrough by Klyachko This book is written by the hands of two masters in the field and will be useful to all those interested in these topics T he graphical conditions are excellent Zentralblatt MATHThis monograph gives a beautiful account of a fundamental them
