By Victor Guillemin : Moment Maps, Cobordisms, and Hamiltonian Group Actions (Mathematical Surveys and Monographys, Vol. 98) Moment Maps, Cobordisms, and Hamiltonian Group Actions (Mathematical Surveys and Monographys, Vol. 98):

This research monograph presents many new results in a rapidly developing area of great current interest Guillemin Ginzburg and Karshon show that the underlying topological thread in the computation of invariants of G manifolds is a consequence of a linearization theorem involving equivariant cobordisms The book incorporates a novel approach and showcases exciting new research During the last 20 years localization has been one of the dominant themes in the area
