Geometric Control and Non-Holonomic Mechanics: Conference on Geometric Control and Non-holonomic Mechanics, June 19-21, 1996, Mexico City (CMS Conference Proceedings):

Control theory a synthesis of geometric theory of differential equations enriched with variational principles and the associated symplectic geometry emerges as a new mathematical subject of interest to engineers mathematicians and physicists This collection of articles focuses on several distinctive research directions having origins in mechanics and differential geometry but driven by modern control theory The first of these directions deals with the singularitie
