**By Marcel Berger : Riemannian Geometry During the Second Half of the Twentieth Century (University Lecture Series)** four vector derivations of relativity spacetime diagrams differential geometry curved spacetime

mathematics of general relativity spacetime topology the scientific activity of vladimir varicak 1865 1942 professor of mathematics at the university of zagreb was mainly in non euclidean geometry and its Riemannian Geometry During the Second Half of the Twentieth Century (University Lecture Series):

During its first hundred years Riemannian geometry enjoyed steady but undistinguished growth as a field of mathematics In the last fifty years of the twentieth century however it has exploded with activity Berger marks the start of this period with Rauch s pioneering paper of 1951 which contains the first real pinching theorem and an amazing leap in the depth of the connection between geometry and topology Since then the field has become so rich that it is almos
