By Andreas Cap and Jan Slovák : Parabolic Geometries I (Mathematical Surveys and Monographs) Parabolic Geometries I (Mathematical Surveys and Monographs):

Parabolic geometries encompass a very diverse class of geometric structures including such important examples as conformal projective and almost quaternionic structures hypersurface type CR structures and various types of generic distributions The characteristic feature of parabolic geometries is an equivalent description by a Cartan geometry

modeled on a generalized flag manifold the quotient of a semisimple Lie group by a parabolic subgroup Background on differ An excellent book Serving both as a timely introduction to parabolic geometry and as a general introductory work for Lie groups and Cartan geometries This review cannot do justice to the power and generality of parabolic geometry theory but this book ce
