By Ilka Agricola, Thomas Friedrich : Global Analysis: Differential Forms in Analysis, Geometry, and Physics (Graduate Studies in Mathematics)

mcmicken mathematics requirements all 1000 and 2000 level courses will partially satisfy the quantitative reasoning requirement of the college of arts mathematics undergraduate program graduate program faculty all courses faculty listings and curricular and degree requirements described herein are Global Analysis: Differential Forms in Analysis, Geometry, and Physics (Graduate Studies in Mathematics):

This book is an introduction to differential geometry through differential forms emphasizing their applications in various areas of mathematics and physics Well written and with plenty of examples this textbook originated from courses on geometry and analysis and presents a widely used mathematical technique in a lucid and very readable style The authors introduce readers to the world of differential forms while covering relevant topics from analysis differential geometry Language Notes Text English translation Original Language German
