The mean curvature of a surface is an extrinsic parameter measuring how the surface is curved in the three dimensional space A surface whose mean curvature is zero at each point is a minimal surface and it is known that such surfaces are models for soap film There is a rich and well known theory of minimal surfaces A surface whose mean curvature is constant but nonzero is obtained when we try to minimize the area of a closed surface without changing the volume it enc From a review of the Japanese edition The first thing one notices about this book is that it includes many beautiful pictures of surfaces which allow the reader to move comfortably through the material The book takes the reader from historical results thr
