mathematical society Homological and Homotopical Aspects of Torsion Theories (Memoirs of the American Mathematical Society):

In this paper the authors investigate homological and homotopical aspects of a concept of torsion which is general enough to cover torsion and cotorsion pairs in abelian categories  $t$  structures and recollements in triangulated categories and torsion pairs in stable categories The proper conceptual framework for this study is the general setting of pretriangulated categories an omnipresent class of additive categories which includes abelian triangulated stable an
