By Gabor Szekelyhidi : An Introduction to Extremal Kahler Metrics (Graduate Studies in Mathematics) An Introduction to Extremal Kahler Metrics (Graduate Studies in Mathematics):

A basic problem in differential geometry is to find canonical metrics on manifolds. The best known example of this is the classical uniformization theorem for Riemann surfaces. Extremal metrics were introduced by Calabi as an attempt at finding a higher dimensional generalization of this result in the setting of Kähler geometry. This book gives an introduction to the study of extremal Kähler metrics and in particular to the conjectural picture relating the existence of them. This is an important book in a rapidly developing area that brings the specialist or graduate student working on Kähler geometry to the frontiers of today's research. It is not a self-contained textbook. The prerequisites in geometric invariant theory are
