By Thomas E. Cecil, Patrick J. Ryan: Geometry of Hypersurfaces (Springer Monographs in Mathematics) number theorist namesg istvn gal diophantine equations and power integral bases istvn gal birkhaser 2002 wojciech gajda; aurlien galateau courses 1 babsc i a algebra b differential calculus and vector calculus c integral calculus and trigonometry d vector analysis and geometry Geometry of Hypersurfaces (Springer Monographs in Mathematics):

This exposition provides the state of the art on the differential geometry of hypersurfaces in real complex and quaternionic space forms Special emphasis is placed on isoparametric and Dupin hypersurfaces in real space forms as well as Hopf hypersurfaces in complex space forms The book is accessible to a reader who has completed a one year graduate course in differential geometry The text including open problems and an extensive list of references is an excelle Idquo This 600 page book is the result of the authors rsquo efforts to provide a detailed presentation of the present day differential geometry of hypersurfaces in real complex and quaternionic space forms hellip A summary of the frequently used notati
