articles rule 1 if no letter in front of a letter is of greater value add the numbers represented by the letters example $xxx = 30$; $vi = 6$ Handbook of Geometric Analysis, No. 1 (volume 7 of the Advanced Lectures in Mathematics series):

1 of 2 review helpful Part of a simply outstanding series of eight such instructional texts By Midwest Book Review
The need for student friendly instructional texts in the field of mathematics is essential to the continued advancement of science in general and the technologies upon which our 21st century are based Now a joint publishing project of the International Press of Boston in cooperation with the Higher Education Press Geometric Analysis combines differential equations with differential geometry An important aspect of geometric analysis is to approach geometric problems by studying differential equations Besides some known linear differential operators such as the Laplace operator many differential equations arising from differential geometry are nonlinear A particularly important example is the Monge-Ampère equation Applications to geometric problems have also motivated ne About the Author Lizhen Ji is at the University of Michigan Peter Li is professor emeritus of Asian studies at Rutgers University He is co editor of Culture and Politics in China An Anatomy of Tiananmen Square and editor of Japanese War Crimes
