By Ian M. Chiswell : A Course in Formal Languages, Automata and Groups (Universitext) A Course in Formal Languages, Automata and Groups (Universitext):

This book is based on notes for a master's course given at Queen Mary University of London in the 1998-9 session. Such courses in London are quite short and the course consisted essentially of the material in the first three chapters together with a two-hour lecture on connections with group theory. Chapter 5 is a considerably expanded version of this. For the course the main sources were the books by Hopcroft and Ullman [20] by Cohen [4] and by Epstein [1]. From the reviews. This short work by Chiswell [1] covers formal languages, automata theory and the word problem in group theory. This content is bound together by the unifying theme of what is known as Church's thesis, which states that any desi
