By Peter J. Cameron : Sets, Logic and Categories (Springer Undergraduate Mathematics Series) a gentle introduction my category theory a gentle introduction is intended to be relatively accessible; in particular it presupposes rather less mathematical graduate texts in mathematics gtm issn 0072 5285 is a series of graduate level textbooks in mathematics published by springer verlag the books in this series Sets, Logic and Categories (Springer Undergraduate Mathematics Series):

2 of 2 review helpful Kudos Cameron has done it again By Eric Moorhouse Excellent textbook on sets and mathematical logic for the senior undergraduate or beginning graduate student although not much on categories here I have repeatedly adopted this as a textbook and recommended it to others Yes it is a lighter introduction than some this is what attracts me to it I find it unusual and refreshing to be able to c Set theory logic and category theory lie at the foundations of mathematics and have a dramatic effect on the mathematics that we do through the Axiom of Choice G ouml del s Theorem and the Skolem Paradox But they are also rich mathematical theories in their own right contributing techniques and results to working mathematicians such as the Compactness Theorem and module categories The book is aimed at those who know some mathematics and want to know more about it From the reviews BULLETIN OF MATHEMATICS BOOKS hellip a well written introduction to logic with a good dose of set theory introduction to ordinals and a small dose of categories at the end I read this one cover to cover
