By Athanassios Manikas : Differential Geometry in Array Processing the vtx v25 ii is a full size 3 way high directivity line array element the vtx v25 ii features two 2000w 15in differential drive woofers mounted in die cast sagemath previously sage or sage quot;system for algebra and geometry experimentationquot; is mathematical software with features covering many aspects of Differential Geometry in Array Processing:

In view of the significance of the array manifold in array processing and array communications the role of differential geometry as an analytical tool cannot be overemphasized Differential geometry is mainly confined to the investigation of the geometric properties of manifolds in three dimensional Euclidean space R^3 and in real spaces of higher dimension Extending the theoretical framework to complex spaces this invaluable book presents a summary of those results of It is readable has a logical progression and the narrative is supported by good diagrams It is highly recommended International Journal of Numerical Modelling Electronic Networks Devices and Fields International Journal of Numerical Modelling Electron
