curricular and degree requirements described herein are An Introduction to the Geometry of Stochastic Flows:

This book aims to provide a self contained introduction to the local geometry of the stochastic flows It studies the hypoelliptic operators which are written in Hörmander's form by using the connection between stochastic flows and partial differential equations The book stresses the author's view that the local geometry of any stochastic flow is determined very precisely and explicitly by a universal formula referred to as the Chen-Strichartz formula The natural
