departamento de matemtica aplicada Lecture Notes on Mean Curvature Flow (Progress in Mathematics):

This book is an introduction to the subject of mean curvature flow of hypersurfaces with special emphasis on the analysis of singularities This flow occurs in the description of the evolution of numerous physical models where the energy is given by the area of the interfaces These notes provide a detailed discussion of the classical parametric approach mainly developed by R Hamilton and G Huisken They are well suited for a course at PhD PostDoc level and can be us From the book reviews ldquo This award winning monograph provides an introduction to the topic of mean curvature flow of hypersurfaces in Euclidean space for the advanced student and the researcher hellip It reorganizes material scattered throughout the
