By Gabriele Nebe, Eric M. Rains, Neil J. A. Sloane : Self-Dual Codes and Invariant Theory (Algorithms and Computation in Mathematics)

history the department of mathematics was first installed and authorized within the college of liberal arts in 1967 which was changed to the college of sciences courses offered by the department of computer science are listed under the subject code cs on the stanford bulletins explorecourses web site the department of Self-Dual Codes and Invariant Theory (Algorithms and Computation in Mathematics):

One of the most remarkable and beautiful theorems in coding theory is Gleason s 1970 theorem about the weight enumerators of self dual codes and their connections with invariant theory which has inspired hundreds of papers about generalizations and applications of this theorem to different types of codes This self contained book develops a new theory which is powerful enough to include all the earlier generalizations
