**By Mark Gross, Daniel Huybrechts, Dominic Joyce : Calabi-Yau Manifolds and Related Geometries** in physics string theory is a theoretical framework in which the point like particles of particle physics are replaced by one dimensional objects called strings m theory is a theory in physics that unifies all consistent versions of superstring

theory the existence of such a theory was first conjectured by edward witten at a Calabi-Yau Manifolds and Related Geometries:

This is an introduction to a very active field of research on the boundary between mathematics and physics It is aimed at graduate students and researchers in geometry and string theory Proofs or sketches are given for many important results From the reviews An excellent introduction to current research in the geometry of Calabi Yau manifolds hyper K aum l hler manifolds exceptional holonomy and mirror symmetry This is an excellent and useful b From the reviews Summer schools in Nordfjordeid Norway have been organized regularly since 1996 Topics vary each year but there are always three series of lectures by invited experts with evening exercises hellip The themes of all three contributio
