**By Michel Demazure : Bifurcations and Catastrophes: Geometry of Solutions to Nonlinear Problems (Universitext)** Bifurcations and Catastrophes: Geometry of Solutions to Nonlinear Problems (Universitext):

Based on a lecture course this text gives a rigorous introduction to nonlinear analysis dynamical systems and bifurcation theory including catastrophe theory Wherever appropriate it emphasizes a geometrical or coordinate free approach allowing a clear focus on the essential mathematical structures It brings out features common to different branches of the subject while giving ample references for more advanced or technical developments This book gives an introduction to the basic ideas in dynamical systems and catastrophe and bifurcation theory It starts with the geometrical concepts which are necessary for the rest of the book In the first four chapters the author introduces the notion
