**From Brand: Springer : Visualization and Mathematics: Experiments, Simulations and Environments** written for the java virtual machine netlogo runs on macs windows and linux designed to model complex systems it is the next generation of a series of multi what is it based on computational physics research energy2d is an interactive visual multiphysics simulation program that models all three modes of heat Visualization and Mathematics: Experiments, Simulations and Environments:

Visualization and mathematics have begun a fruitful relationship establishing links between problems and solutions of both fields In some areas of mathematics like differential geometry and numerical mathematics visualization techniques are applied with great success However visualization methods are relying heavily on mathematical concepts Applications of visualization in mathematical research and the use of mathematical methods in visualization have been topi From the Back Cover Visualization and mathematics have begun a fruitful relationship establishing many links between problems and solutions of both fields In some areas of mathematics such as numerical mathematics and differential geometry visualization tech
