The contemporary theoretical physics consists by and large of two independent parts The rst is the quantum theory describing the micro world of elementary p ticles the second is the theory of gravity that concerns properties of macroscopic systems such as stars galaxies and the universe The relativistic theory of gr itation which is known as general relativity was created at the beginning of the last century by more or less a single man from pure idea combinat From the reviews ldquo This text on the physical theory of gravitation hellip is primarily aimed at students who wish to proceed with further study in astrophysics and cosmology and the approach as well as the choice of topics reflects this hellip The
