By A. Bialynicki-Birula, J. Carrell, W.M. McGovern : Algebraic Quotients. Torus Actions and Cohomology. The Adjoint Representation and the Adjoint Action (Encyclopaedia of Mathematical Sciences) Algebraic Quotients. Torus Actions and Cohomology. The Adjoint Representation and the Adjoint Action (Encyclopaedia of Mathematical Sciences):

This is the second volume of the new subseries Invariant Theory and Algebraic Transformation Groups The aim of the survey by A Bialynicki Birula is to present the main trends and achievements of research in the theory of quotients by actions of algebraic groups This theory contains geometric invariant theory with various applications to problems of moduli theory The contribution by J Carrell treats the subject of torus actions on algebraic varieties giving a deta This volume of the Encyclopaedia of Mathematical Sciences contains three contributions on actions of algebraic groups The first one by A Bialynicki Birula is concerned with the general concept of a quotient while the other two by J B Carrell and W M M
