By Werner Ballmann : Lectures on Spaces of Nonpositive Curvature (Oberwolfach Seminars) Lectures on Spaces of Nonpositive Curvature (Oberwolfach Seminars):

Singular spaces with upper curvature bounds and in particular spaces of nonpositive curvature have been of interest in many fields including geometric and combinatorial group theory topology dynamical systems and probability theory In the first two chapters of the book a concise introduction into these spaces is given culminating in the Hadamard Cartan theorem and the discussion of the ideal boundary at infinity for simply connected complete spaces of nonposit
