**By Francesco Catoni, Dino Boccaletti, Roberto Cannata, Vincenzo Catoni, Enrico Nichelatti, Paolo Zampetti :  
The Mathematics of Minkowski Space-Time: With an Introduction to Commutative Hypercomplex Numbers  
(Frontiers in Mathematics)** The Mathematics of Minkowski Space-Time: With an Introduction to Commutative  
Hypercomplex Numbers (Frontiers in Mathematics):

0 of 0 review helpful Interesting ecuations By Customer Perfecto to improve your bank of knowledge This book arose out of original research on the extension of well established applications of complex numbers related to Euclidean geometry and to the space time symmetry of two dimensional Special Relativity The system of hyperbolic numbers is extensively studied and a plain exposition of space time geometry and trigonometry is given Commutative hypercomplex systems with four unities are studied and attention is drawn to their interesting properties From the reviews lquo It is worth pointing out that the book is mainly a text about commutative hypercomplex numbers and some of their applications to a 2 dimensional Minkowski spacetime hellip This book should be interesting to anybody who is interested
