By Stefano Pigola, Marco Rigoli, Alberto G Setti : Vanishing and Finiteness Results in Geometric Analysis: A Generalization of the Bochner Technique (Progress in Mathematics) Vanishing and Finiteness Results in

Geometric Analysis: A Generalization of the Bochner Technique (Progress in Mathematics):

This book describes very recent results involving an extensive use of analytical tools in the study of geometrical and topological properties of complete Riemannian manifolds It analyzes in detail an extension of the Bochner technique to the non compact setting yielding conditions which ensure that solutions of geometrically significant differential equations either are trivial vanishing results or give rise to finite dimensional vector spaces finiteness results From the Back Cover This book presents very recent results involving an extensive use of analytical tools in the study of geometrical and topological properties of complete Riemannian manifolds It analyzes in detail an extension of the Bochner technique to the
