(Monographs in Mathematics):

This book is intended to be a self contained introduction to analytic foundations of a level set method for various surface evolution equations including curvature flow equations These equations are important in various fields including material sciences image processing and differential geometry The goal of this book is to introduce a generalized notion of solutions allowing singularities and solve the initial value problem globally in time in a generalized sense Vario In view of its detailed and thorough presentation this book will be a valuable source for everyone interested in the level set approach to surface evolution equations Zentralblatt MATH From the Back Cover
