**By M.-E. Craioveanu, Mircea Puta, Themistocles RASSIAS : Old and New Aspects in Spectral Geometry (Mathematics and Its Applications)** mcmicken mathematics requirements all 1000 and 2000 level courses will

partially satisfy the quantitative reasoning requirement of the college of arts mathematics calendar questions and answers regarding this page can be sent to [mathcalamsorg](mailto:mathcalamsorg) you can submit an entry to the mathematics calendar Old and New Aspects in Spectral Geometry (Mathematics and Its Applications):

It is known that to any Riemannian manifold  $M$  with or without boundary one can associate certain fundamental objects Among them are the Laplace Beltrami operator and the Hodge de Rham operators which are natural that is they commute with the isometries of  $M$  elliptic self adjoint second order differential operators acting on the space of real valued smooth functions on  $M$  and the spaces of smooth differential forms on  $M$  respectively If  $M$  is closed
