By Chaohao Gu, Anning Hu, Zixiang Zhou : Darboux Transformations in Integrable Systems: Theory and their Applications to Geometry (Mathematical Physics Studies)

rogers c and clarkson p 2017 ermakov painlev ii symmetry reduction of a korteweg capillarity system symmetry integrability and geometry methods and list of the greatest mathematicians ever and their contributions Darboux Transformations in Integrable Systems: Theory and their Applications to Geometry (Mathematical Physics Studies):

GU Chaohao The soliton theory is an important branch of nonlinear science On one hand it describes various kinds of stable motions appearing in ture such as solitary water wave solitary signals in optical bre etc and has many applications in science and technology like optical signal communication On the other hand it gives many e ective methods ofgetting explicit solutions of nonlinear partial di erential equations Therefore it has attracted much attentio From the reviews The book is concerned with mutual relations between the differential geometry of surfaces and the theory of integrable nonlinear systems of partial differential equations It concentrates on the Darboux matrix method for constructing exp
