By Alexei Avgustinovich Tuzhilin : Branching Solutions of One-Dimensional V a random walk is a mathematical object known as a stochastic or random process that describes a path that consists of a succession of random steps on some radiometric dating how radiometric dating works in general why methods in general are inaccurate why k ar dating is inaccurate the branching ratio problem Branching Solutions of One-Dimensional V:

This book deals with the new class of one dimensional variational problems mdash the problems with branching solutions Instead of extreme curves mappings of a segment to a manifold we investigate extreme networks which are mappings of graphs one dimensional cell complexes to a manifold Various applications of the approach are presented such as several generalizations of the famous Steiner problem of finding the shortest network spanning given points of the plan nice contribution to the study of Steiner trees and a useful reference to the researchers in mathematics and computer science Mathematics Abstracts 2002
