2 of 2 review helpful Power of Thought By ChonFai Kam Before you read this book please note that you have a sound foundation of differential geometry on surface Do Carmo has a very good text book on it I have heard a lot of

complaints like they don't understand Master's work of their time or just simply said it is over-simplified. This book is a truly master work; it is the direct extension of the geometry. Foreword by S. S. Chern. In 1926-27 Cartan gave a series of lectures in which he introduced exterior forms at the very beginning and used extensively orthogonal frames throughout to investigate the geometry of Riemannian manifolds. In this course he solved a series of problems in Euclidean and non-Euclidean spaces as well as a series of variational problems on geodesics. In 1960 Sergei P. Finikov translated from French into Russian his notes of these Cartan's lectures. The reviewer expresses his hearty appreciation to the authors for their utmost endeavor of translating E. Cartan's ever valuable lectures. Zentralblatt für Mathematik Language Notes Text English translation Or
