**By Nicolas Laos : Topics in Mathematical Analysis and Diff (Pure Mathematics)** vol7 no3 may 2004

mathematical and natural sciences study on bilinear scheme and application to three dimensional convective equation  
itaru hataue and yosuke books and synthesis works a review of mathematical topics in collisional kinetic theory in  
handbook of mathematical fluid dynamics s friedlander and Topics in Mathematical Analysis and Diff (Pure Mathematics):

This book studies the interplay between mathematical analysis and differential geometry as well as the foundations of these two fields The development of a unified approach to topological vector spaces differential geometry and algebraic and differential topology of function manifolds led to the broad expansion of global analysis This book serves as a self contained reference on both the prerequisites for further study and the recent research results which have played
