**By Jean-marc Ginoux : Differential Geometry Applied to Dynamical Systems (World Scientific Series on Nonlinear Science, Series a)** chaos theory is a branch of mathematics focused on the behavior of dynamical systems

that are highly sensitive to initial conditions chaos is an interdisciplinary this article itemizes the various lists of mathematics topics some of these lists link to hundreds of articles; some link only to a few the template to the right  
Differential Geometry Applied to Dynamical Systems (World Scientific Series on Nonlinear Science, Series a):

6 of 8 review helpful Written in a rush By Juan Pablo Carbajal The book is written in a poor English filled with grammatical and orthographic mistakes Lack of punctuation makes it really hard to understand The organization of the chapters is a mess First part introduces the necessary previous knowledge but is populated with errors on the equations missing upper indexes etc Most of the Theorems presented and This book aims to present a new approach called Flow Curvature Method that applies Differential Geometry to Dynamical Systems Hence for a trajectory curve an integral of any  $n$  dimensional dynamical system as a curve in Euclidean  $n$  space the curvature of the trajectory or the flow may be analytically computed Then the location of the points where the curvature of the flow vanishes defines a manifold called flow curvature manifold Such a manifold being defined In sum this book presents an interesting overview of an alternative and possibly unifying geometric framework for the study of general systems of ordinary differential equations Researchers with a background in dynamical systems theory and an interest in a
