By Mark Pankov : Geometry of Semilinear Embeddings: Relations to Graphs and Codes Geometry of Semilinear Embeddings: Relations to Graphs and Codes:

This volume covers semilinear embeddings of vector spaces over division rings and the associated mappings of Grassmannians In contrast to classical books we consider a more general class of semilinear mappings and show that this class is important A large portion of the material will be formulated in terms of graph theory that is Grassmann graphs graph embeddings and isometric embeddings In addition some relations to linear codes will be described Graduate stud From the Inside Flap This volume covers semilinear embeddings of vector spaces over division rings and the associated mappings of Grassmannians In contrast to classical books we consider a more general class of semilinear mappings and show that this class is i
