By K Yang : Almost Complex Homogeneous Spaces And Their Submanifolds misha verbitsky a homepage my papers in arxivorg; publications a list of papers research overview pdf curriculum vitae; laboratory of algebraic geometry in mathematics a 3 manifold is a space that locally looks like euclidean 3 dimensional space a 3 manifold can be thought of as a possible shape of the universe Almost Complex Homogeneous Spaces And Their Submanifolds:

This book is an introduction to the theory of almost complex homogeneous spaces and certain closely related class of spaces so called partial G flag manifolds Submanifolds in particular holomorphic curves are also treated using the theory of moving frames and the structure theory of compact lie groups The exposition is reasonably self contained and this book is strongly recommended as a text for beginning graduate students
