By S. Alinhac : Geometric Analysis of Hyperbolic Differential Equations: An Introduction (London Mathematical Society Lecture Note Series) august 14 2017 december 15 2017 geometric functional analysis and

applications mathematical sciences research institute berkeley california maxwells equations are a set of partial differential equations that together with the lorentz force law form the foundation of classical electromagnetism quantum Geometric Analysis of Hyperbolic Differential Equations: An Introduction (London Mathematical Society Lecture Note Series):

Its self contained presentation and do it yourself approach make this the perfect guide for graduate students and researchers wishing to access recent literature in the field of nonlinear wave equations and general relativity It introduces all of the key tools and concepts from Lorentzian geometry metrics null frames deformation tensors etc and provides complete elementary proofs The author also discusses applications to topics in nonlinear equations including This book provides an excellent introduction to nonlinear wave equations and it can be recommended to anyone who wants to access the recent mathematical literature on this subject Zentralblatt MATH About the Author S
